Andrea,

Would you please reach out to Terry Bonnette to touch base on how Tunica Biloxi is doing.

I think they are far enough inland/north but we should check to see that they have a way to run the water system should they experience power outage (i.e., do they have generators that have been exercise and filled or other emergency options).

Also ask him how the rain is there, is there any areas subject of flooding, and have business or schools closed as a result.

Thanks

Jim,
just FYI - Alabama Coushatta Tribe of Texas

I called the water system operator to touch base on how they are doing. Jatin and John had good phone numbers for them per last emergency working w/ Jackson Langley.

Alabama Coushatta has 2 water systems (Eastside and Westside water systems) that serve a combined total population of over 500.

Manning Robinson (operator who as on rotation to work this weekend) answered the phone. Jackson Langley is scheduled to work Monday 8/28.

Manning reported that the they are doing fine, they have been in emergency preparedness mode since Wed. on both the DW and WW side.

They have generators (propane and diesel) filled up and ready to go in case they are needed at the water and sewer stations.

They have seen rain trickle down and then get heavy, and then trickle.

They anticipate more rain, but he said there is no closure of businesses or schools.

Alabama Coushatta is located 17 mi East of Livingston, Texas (about an hr NE of Houston and NW of Beaumont; if we drew a triangle they are at the top tip with Houston at left tip and Beaumont at right tip of triangle)

Thanks
